CosmicNavigation patents Ipod navigation

CosmicNavigation is in cooperation with students of the Technical University Delft already working for months on the development of mp3 navigation. Navigation with audio commands on an mp3 player has been patented by CosmicNavigation.

It is an application without a GPS antenna with only audio commands. A team of specialists within CosmicNavigation works at this moment on two different solutions:

VayaSolo a free online webportal www.vayaplanner.com where bike hike and car routes can be made and shared. The routes will be altered with Text to speech technology into voice commands en then automatically be added into iTunes. After that people take their mp3player and follow a route without a GPS antenna. VayaSolo works perfectly with iTunes en Windows MediaPlayer. Olivier Chevalier, Director of CosmicNavigation: This way we make useful and fun tourist routes available for free for all mp3 players.

VayaDuo a navigation system developed for in-car navigation and for navigation of the last mile. The VayaDuo consists of two parts. A base module with GPS receiver, which operates like a common car navigation aid and a detachable handset, similar to a compact mp3 player. The base module is used for driving and setting the destination. When the user has parked his car, he disconnects the handset and continues on foot by predefined speech instructions of the handset.

Research of CosmicNavigation and the Technical University Delft has proven that cities are harder and harder to reach by car. Olivier Chevalier, Director of CosmicNavigation: With the VAYA Duo you can navigate easily to a parking lot and walk the last mile on foot. This way we stimulate that people avoid the city centers by car. Furthermore it is much easier to take an mp3player with you than a complete and expensive navigation system.

CosmicNavigation will be present during the IFA in Berlin to show to a selective audience this new development. (31 August - 5 September 2007, Hal 4.2, Standnummer 128)

CosmicNavigation is een innovatieve ontwikkelaar van op maat GPS toepassingen. CosmicNavigation heeft een uniek navigatiesoftware platform, speciaal ontworpen voor het eenvoudig creëren van privatelabels. CosmicNavigation biedt naast navigatiesoftware verschillende producten en services om haar klanten te ondersteunen bij het lanceren en managen van hun GPS producten; zoals helpdesk-, aftersales-, marketing- and sourcing activiteiten. CosmicNavigation helpt bedrijven bij de ontwikkeling, lancering en het managen van hun navigatieproducten.
